

PLUMBER INTER-GALACTIC CASE FILE — PCF-CASE-046

Subject:	Omnitrix DNA Archive Core
Classification:	N/A (Galvan Tech System)
Domain:	Dna Sample Corruption
Location:	Galvan Prime Remote Diagnostics Lab
Incident No.:	PCF-3426

OVERVIEW

This file documents a Plumber field response concerning Omnitrix DNA Archive Core, logged under a DNA sample corruption classification at Galvan Prime Remote Diagnostics Lab. The report below summarizes the chronological action log, subject profile notes, and technical appendix compiled by the responding unit.

SUBJECT PROFILE

Threat assessments for Omnitrix DNA Archive Core are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Prior documentation on Omnitrix DNA Archive Core indicates a pattern of activity concentrated around Galvan Prime Remote Diagnostics Lab and comparable sites.

Omnitrix DNA Archive Core is classified under Plumber records as N/A (Galvan Tech System), associated primarily with incidents involving DNA sample corruption.

No unusual physiological readings were noted for Omnitrix DNA Archive Core during this incident beyond what is typical for prior encounters of this classification.

INCIDENT TIMELINE

By 21:15, the situation had been assessed as stable enough to proceed with standard documentation protocol.

At 03:12, containment procedures appropriate to a DNA sample corruption scenario were initiated.

By 09:20, a Plumber response unit had been dispatched to assess the situation at Galvan Prime Remote Diagnostics Lab.

At 21:15, a secondary team arrived to assist with cleanup and evidence cataloguing.

At 11:05, the incident was formally closed pending review by the Central Depot oversight committee.

At approximately 09:20, direct visual confirmation of Omnitrix DNA Archive Core was logged by the responding unit.

TECHNICAL DATA

No incident-specific technical code was generated for this report; standard monitoring equipment was used without configuration changes.

PROCEDURAL NOTES

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section of the Plumber Operations Manual, Revision 12.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

APPENDIX

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

This report is filed in accordance with Plumber Standard Operating Procedure 4.2, which requires a full incident summary, a subject profile, a chronological action log, and a technical appendix for any field event involving extraterrestrial technology, biology, or personnel.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Prior documentation on Omnitrix DNA Archive Core indicates a pattern of activity concentrated around Galvan Prime Remote Diagnostics Lab and comparable sites.

Omnitrix DNA Archive Core is classified under Plumber records as N/A (Galvan Tech System), associated primarily with incidents involving DNA sample corruption.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

Threat assessments for Omnitrix DNA Archive Core are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.
