

PLUMBER INTER-GALACTIC CASE FILE — PCF-CASE-033

Subject:	Malware
Classification:	Galvanic Mechomorph
Domain:	Systems Corruption Outbreak
Location:	Galvan B Tech Foundry
Incident No.:	PCF-2136

OVERVIEW

This file documents a Plumber field response concerning Malware, logged under a systems corruption outbreak classification at Galvan B Tech Foundry. The report below summarizes the chronological action log, subject profile notes, and technical appendix compiled by the responding unit.

SUBJECT PROFILE

Threat assessments for Malware are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Malware is classified under Plumber records as Galvanic Mechomorph, associated primarily with incidents involving systems corruption outbreak.

Prior documentation on Malware indicates a pattern of activity concentrated around Galvan B Tech Foundry and comparable sites.

No unusual physiological readings were noted for Malware during this incident beyond what is typical for prior encounters of this classification.

INCIDENT TIMELINE

At 07:45, field sensors first registered anomalous activity in the vicinity of Galvan B Tech Foundry.

At 11:05, containment procedures appropriate to a systems corruption outbreak scenario were initiated.

At 07:45, a secondary team arrived to assist with cleanup and evidence cataloguing.

Shortly after 13:40, communications with the response team were briefly disrupted, consistent with prior incidents of this type.

At 21:15, the incident was formally closed pending review by the Central Depot oversight committee.

By 15:55, the situation had been assessed as stable enough to proceed with standard documentation protocol.

TECHNICAL DATA

Following standard resolution procedure, a technical code was generated and logged against this incident for archival cross-reference purposes.

Portal Stabilization Code: D9E

This code is recorded here solely for archival completeness and is not required for standard case review.

PROCEDURAL NOTES

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

APPENDIX

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section of the Plumber Operations Manual, Revision 12.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

No unusual physiological readings were noted for Malware during this incident beyond what is typical for prior encounters of this classification.

Malware is classified under Plumber records as Galvanic Mechomorph, associated primarily with incidents involving systems corruption outbreak.

Prior documentation on Malware indicates a pattern of activity concentrated around Galvan B Tech Foundry and comparable sites.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.
