

PLUMBER INTER-GALACTIC CASE FILE — PCF-CASE-023

Subject:	Albedo
Classification:	Galvan (rogue)
Domain:	Unauthorized Omnitrax Replication
Location:	Galvan Mark II Research Annex
Incident No.:	PCF-2203

OVERVIEW

This file documents a Plumber field response concerning Albedo, logged under a unauthorized Omnitrax replication classification at Galvan Mark II Research Annex. The report below summarizes the chronological action log, subject profile notes, and technical appendix compiled by the responding unit.

SUBJECT PROFILE

Prior documentation on Albedo indicates a pattern of activity concentrated around Galvan Mark II Research Annex and comparable sites.

Threat assessments for Albedo are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

No unusual physiological readings were noted for Albedo during this incident beyond what is typical for prior encounters of this classification.

Albedo is classified under Plumber records as Galvan (rogue), associated primarily with incidents involving unauthorized Omnitrax replication.

INCIDENT TIMELINE

At 07:45, a secondary team arrived to assist with cleanup and evidence cataloguing.

At 23:02, containment procedures appropriate to a unauthorized Omnitrax replication scenario were initiated.

At 02:48, field sensors first registered anomalous activity in the vicinity of Galvan Mark II Research Annex.

At 02:48, the incident was formally closed pending review by the Central Depot oversight committee.

By 02:48, the situation had been assessed as stable enough to proceed with standard documentation protocol.

At approximately 21:15, direct visual confirmation of Albedo was logged by the responding unit.

TECHNICAL DATA

Following standard resolution procedure, a technical code was generated and logged against this incident for archival cross-reference purposes.

DNA Archive Decryption Code: J4L

This code is recorded here solely for archival completeness and is not required for standard case review.

PROCEDURAL NOTES

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

APPENDIX

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section of the Plumber Operations Manual, Revision 12.

Prior documentation on Albedo indicates a pattern of activity concentrated around Galvan Mark II Research Annex and comparable sites.

Threat assessments for Albedo are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

No unusual physiological readings were noted for Albedo during this incident beyond what is typical for prior encounters of this classification.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

This report is filed in accordance with Plumber Standard Operating Procedure 4.2, which requires a full incident summary, a subject profile, a chronological action log, and a technical appendix for any field event involving extraterrestrial technology, biology, or personnel.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

Albedo is classified under Plumber records as Galvan (rogue), associated primarily with incidents involving unauthorized Omnitrix replication.

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Prior documentation on Albedo indicates a pattern of activity concentrated around Galvan Mark II Research Annex and comparable sites.

Threat assessments for Albedo are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.
