

PLUMBER INTER-GALACTIC CASE FILE — PCF-CASE-045

Subject:	Null Void Containment Grid
Classification:	N/A (Facility System)
Domain:	Portal Stabilization Malfunction
Location:	Plumber Null Void Relay Station 2
Incident No.:	PCF-3375

OVERVIEW

This file documents a Plumber field response concerning Null Void Containment Grid, logged under a portal stabilization malfunction classification at Plumber Null Void Relay Station 2. The report below summarizes the chronological action log, subject profile notes, and technical appendix compiled by the responding unit.

SUBJECT PROFILE

No unusual physiological readings were noted for Null Void Containment Grid during this incident beyond what is typical for prior encounters of this classification.

Threat assessments for Null Void Containment Grid are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Null Void Containment Grid is classified under Plumber records as N/A (Facility System), associated primarily with incidents involving portal stabilization malfunction.

Prior documentation on Null Void Containment Grid indicates a pattern of activity concentrated around Plumber Null Void Relay Station 2 and comparable sites.

INCIDENT TIMELINE

By 02:48, the situation had been assessed as stable enough to proceed with standard documentation protocol.

At 02:48, a secondary team arrived to assist with cleanup and evidence cataloguing.

At 21:15, field sensors first registered anomalous activity in the vicinity of Plumber Null Void Relay Station 2.

By 21:15, a Plumber response unit had been dispatched to assess the situation at Plumber Null Void Relay Station 2.

At approximately 11:05, direct visual confirmation of Null Void Containment Grid was logged by the responding unit.

At 11:05, the incident was formally closed pending review by the Central Depot oversight committee.

TECHNICAL DATA

No incident-specific technical code was generated for this report; standard monitoring equipment was used without configuration changes.

PROCEDURAL NOTES

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

APPENDIX

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section of the Plumber Operations Manual, Revision 12.

This report is filed in accordance with Plumber Standard Operating Procedure 4.2, which requires a full incident summary, a subject profile, a chronological action log, and a technical appendix for any field event involving extraterrestrial technology, biology, or personnel.

Threat assessments for Null Void Containment Grid are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

No unusual physiological readings were noted for Null Void Containment Grid during this incident beyond what is typical for prior encounters of this classification.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

Null Void Containment Grid is classified under Plumber records as N/A (Facility System), associated primarily with incidents involving portal stabilization malfunction.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.
