

PLUMBER INTER-GALACTIC CASE FILE — PCF-CASE-093

Subject:	Null Void Containment Grid
Classification:	N/A (Facility System)
Domain:	Portal Stabilization Malfunction
Location:	Plumber Null Void Relay Station 2
Incident No.:	PCF-3698

OVERVIEW

This file documents a Plumber field response concerning Null Void Containment Grid, logged under a portal stabilization malfunction classification at Plumber Null Void Relay Station 2. The report below summarizes the chronological action log, subject profile notes, and technical appendix compiled by the responding unit.

SUBJECT PROFILE

Null Void Containment Grid is classified under Plumber records as N/A (Facility System), associated primarily with incidents involving portal stabilization malfunction.

No unusual physiological readings were noted for Null Void Containment Grid during this incident beyond what is typical for prior encounters of this classification.

Prior documentation on Null Void Containment Grid indicates a pattern of activity concentrated around Plumber Null Void Relay Station 2 and comparable sites.

Threat assessments for Null Void Containment Grid are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

INCIDENT TIMELINE

At 21:15, a secondary team arrived to assist with cleanup and evidence cataloguing.

At 11:05, the incident was formally closed pending review by the Central Depot oversight committee.

By 11:05, the situation had been assessed as stable enough to proceed with standard documentation protocol.

Shortly after 21:15, communications with the response team were briefly disrupted, consistent with prior incidents of this type.

By 15:55, a Plumber response unit had been dispatched to assess the situation at Plumber Null Void Relay Station 2.

At approximately 23:02, direct visual confirmation of Null Void Containment Grid was logged by the responding unit.

TECHNICAL DATA

No incident-specific technical code was generated for this report; standard monitoring equipment was used without configuration changes.

PROCEDURAL NOTES

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

This report is filed in accordance with Plumber Standard Operating Procedure 4.2, which requires a full incident summary, a subject profile, a chronological action log, and a technical appendix for any field event involving extraterrestrial technology, biology, or personnel.

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section of the Plumber Operations Manual, Revision 12.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

APPENDIX

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

Prior documentation on Null Void Containment Grid indicates a pattern of activity concentrated around Plumber Null Void Relay Station 2 and comparable sites.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Threat assessments for Null Void Containment Grid are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.
