

PLUMBER INTER-GALACTIC CASE FILE — PCF-CASE-057

Subject:	Vulkanus
Classification:	Detrovite
Domain:	Mineral Resource Poaching
Location:	Terroanian Mining Belt
Incident No.:	PCF-3275

OVERVIEW

This file documents a Plumber field response concerning Vulkanus, logged under a mineral resource poaching classification at Terroanian Mining Belt. The report below summarizes the chronological action log, subject profile notes, and technical appendix compiled by the responding unit.

SUBJECT PROFILE

Prior documentation on Vulkanus indicates a pattern of activity concentrated around Terroanian Mining Belt and comparable sites.

No unusual physiological readings were noted for Vulkanus during this incident beyond what is typical for prior encounters of this classification.

Threat assessments for Vulkanus are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Vulkanus is classified under Plumber records as Detrovite, associated primarily with incidents involving mineral resource poaching.

INCIDENT TIMELINE

At 07:45, a secondary team arrived to assist with cleanup and evidence cataloguing.

At approximately 21:15, direct visual confirmation of Vulkanus was logged by the responding unit.

Shortly after 03:12, communications with the response team were briefly disrupted, consistent with prior incidents of this type.

By 02:48, a Plumber response unit had been dispatched to assess the situation at Terroanian Mining Belt.

At 11:05, field sensors first registered anomalous activity in the vicinity of Terroanian Mining Belt.

At 03:12, containment procedures appropriate to a mineral resource poaching scenario were initiated.

TECHNICAL DATA

No incident-specific technical code was generated for this report; standard monitoring equipment was used without configuration changes.

PROCEDURAL NOTES

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section

of the Plumber Operations Manual, Revision 12.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

APPENDIX

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section of the Plumber Operations Manual, Revision 12.

Threat assessments for Vulkanus are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

This report is filed in accordance with Plumber Standard Operating Procedure 4.2, which requires a full incident summary, a subject profile, a chronological action log, and a technical appendix for any field event involving extraterrestrial technology, biology, or personnel.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

No unusual physiological readings were noted for Vulkanus during this incident beyond what is typical for prior encounters of this classification.

Prior documentation on Vulkanus indicates a pattern of activity concentrated around Terroanian Mining Belt and comparable sites.

Vulkanus is classified under Plumber records as Detrovite, associated primarily with incidents involving mineral resource poaching.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section of the Plumber Operations Manual, Revision 12.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

Threat assessments for Vulkanus are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.
