---

## OVERVIEW

This file documents a Plumber field response concerning Malware, logged under a systems corruption outbreak classification at Galvan B Tech Foundry. The report below summarizes the chronological action log, subject profile notes, and technical appendix compiled by the responding unit.

## SUBJECT PROFILE

Prior documentation on Malware indicates a pattern of activity concentrated around Galvan B Tech Foundry and comparable sites.

No unusual physiological readings were noted for Malware during this incident beyond what is typical for prior encounters of this classification.

Threat assessments for Malware are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Malware is classified under Plumber records as Galvanic Mechomorph, associated primarily with incidents involving systems corruption outbreak.

## INCIDENT TIMELINE

At 07:45, containment procedures appropriate to a systems corruption outbreak scenario were initiated.

At 03:12, a secondary team arrived to assist with cleanup and evidence cataloguing.

Shortly after 03:12, communications with the response team were briefly disrupted, consistent with prior incidents of this type.

By 02:48, a Plumber response unit had been dispatched to assess the situation at Galvan B Tech Foundry.

At 02:48, the incident was formally closed pending review by the Central Depot oversight committee.

At approximately 03:12, direct visual confirmation of Malware was logged by the responding unit.

## TECHNICAL DATA

Following standard resolution procedure, a technical code was generated and logged against this incident for archival cross-reference purposes.

Containment Override Code: Y4D

This code is recorded here solely for archival completeness and is not required for standard case review.

## PROCEDURAL NOTES

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

## APPENDIX

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section of the Plumber Operations Manual, Revision 12.

Threat assessments for Malware are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Malware is classified under Plumber records as Galvanic Mechomorph, associated primarily with incidents involving systems corruption outbreak.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

No unusual physiological readings were noted for Malware during this incident beyond what is typical for prior encounters of this classification.

This report is filed in accordance with Plumber Standard Operating Procedure 4.2, which requires a full incident summary, a subject profile, a chronological action log, and a technical appendix for any field event involving extraterrestrial technology, biology, or personnel.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

No unusual physiological readings were noted for Malware during this incident beyond what is typical for prior encounters of this classification.
