

PLUMBER INTER-GALACTIC CASE FILE — PCF-CASE-061

Subject:	Attea
Classification:	Incursean
Domain:	Unsanctioned Fleet Incursion
Location:	Incursean Border Marker 5
Incident No.:	PCF-3682

OVERVIEW

This file documents a Plumber field response concerning Attea, logged under a unsanctioned fleet incursion classification at Incursean Border Marker 5. The report below summarizes the chronological action log, subject profile notes, and technical appendix compiled by the responding unit.

SUBJECT PROFILE

No unusual physiological readings were noted for Attea during this incident beyond what is typical for prior encounters of this classification.

Prior documentation on Attea indicates a pattern of activity concentrated around Incursean Border Marker 5 and comparable sites.

Threat assessments for Attea are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Attea is classified under Plumber records as Incursean, associated primarily with incidents involving unsanctioned fleet incursion.

INCIDENT TIMELINE

At 18:30, the incident was formally closed pending review by the Central Depot oversight committee.

At 13:40, a secondary team arrived to assist with cleanup and evidence cataloguing.

Shortly after 09:20, communications with the response team were briefly disrupted, consistent with prior incidents of this type.

By 18:30, a Plumber response unit had been dispatched to assess the situation at Incursean Border Marker 5.

At 03:12, containment procedures appropriate to a unsanctioned fleet incursion scenario were initiated.

At approximately 09:20, direct visual confirmation of Attea was logged by the responding unit.

TECHNICAL DATA

No incident-specific technical code was generated for this report; standard monitoring equipment was used without configuration changes.

PROCEDURAL NOTES

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

APPENDIX

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

This report is filed in accordance with Plumber Standard Operating Procedure 4.2, which requires a full incident summary, a subject profile, a chronological action log, and a technical appendix for any field event involving extraterrestrial technology, biology, or personnel.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

Prior documentation on Attea indicates a pattern of activity concentrated around Incursean Border Marker 5 and comparable sites.

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section of the Plumber Operations Manual, Revision 12.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

No unusual physiological readings were noted for Attea during this incident beyond what is typical for prior encounters of this classification.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

Attea is classified under Plumber records as Incursean, associated primarily with incidents involving unsanctioned fleet incursion.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.
