

PLUMBER INTER-GALACTIC CASE FILE — PCF-CASE-034

Subject:	Diagon
Classification:	Interdimensional Entity
Domain:	Dimensional Rift Containment
Location:	Forge of Creation Perimeter
Incident No.:	PCF-2767

OVERVIEW

This file documents a Plumber field response concerning Diagon, logged under a dimensional rift containment classification at Forge of Creation Perimeter. The report below summarizes the chronological action log, subject profile notes, and technical appendix compiled by the responding unit.

SUBJECT PROFILE

Threat assessments for Diagon are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Prior documentation on Diagon indicates a pattern of activity concentrated around Forge of Creation Perimeter and comparable sites.

No unusual physiological readings were noted for Diagon during this incident beyond what is typical for prior encounters of this classification.

Diagon is classified under Plumber records as Interdimensional Entity, associated primarily with incidents involving dimensional rift containment.

INCIDENT TIMELINE

Shortly after 18:30, communications with the response team were briefly disrupted, consistent with prior incidents of this type.

At approximately 09:20, direct visual confirmation of Diagon was logged by the responding unit.

At 03:12, containment procedures appropriate to a dimensional rift containment scenario were initiated.

By 03:12, the situation had been assessed as stable enough to proceed with standard documentation protocol.

At 03:12, field sensors first registered anomalous activity in the vicinity of Forge of Creation Perimeter.

At 09:20, the incident was formally closed pending review by the Central Depot oversight committee.

TECHNICAL DATA

Following standard resolution procedure, a technical code was generated and logged against this incident for archival cross-reference purposes.

Containment Override Code: X1L

This code is recorded here solely for archival completeness and is not required for standard case review.

PROCEDURAL NOTES

This report is filed in accordance with Plumber Standard Operating Procedure 4.2, which requires a full incident summary, a subject profile, a chronological action log, and a technical appendix for any field event involving extraterrestrial technology, biology, or personnel.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section of the Plumber Operations Manual, Revision 12.

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

APPENDIX

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Threat assessments for Diagon are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

Prior documentation on Diagon indicates a pattern of activity concentrated around Forge of Creation Perimeter and comparable sites.

No unusual physiological readings were noted for Diagon during this incident beyond what is typical for prior encounters of this classification.
