

PLUMBER INTER-GALACTIC CASE FILE — PCF-CASE-019

Subject:	Aggregor
Classification:	Osmosian-Annihilaarg Hybrid
Domain:	Andromeda Galaxy Relic Assembly
Location:	Andromeda Debris Field Checkpoint
Incident No.:	PCF-2447

OVERVIEW

This file documents a Plumber field response concerning Aggregor, logged under a Andromeda Galaxy relic assembly classification at Andromeda Debris Field Checkpoint. The report below summarizes the chronological action log, subject profile notes, and technical appendix compiled by the responding unit.

SUBJECT PROFILE

Threat assessments for Aggregor are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Aggregor is classified under Plumber records as Osmosian-Annihilaarg Hybrid, associated primarily with incidents involving Andromeda Galaxy relic assembly.

Prior documentation on Aggregor indicates a pattern of activity concentrated around Andromeda Debris Field Checkpoint and comparable sites.

No unusual physiological readings were noted for Aggregor during this incident beyond what is typical for prior encounters of this classification.

INCIDENT TIMELINE

At 11:05, containment procedures appropriate to a Andromeda Galaxy relic assembly scenario were initiated.

At approximately 02:48, direct visual confirmation of Aggregor was logged by the responding unit.

By 15:55, a Plumber response unit had been dispatched to assess the situation at Andromeda Debris Field Checkpoint.

Shortly after 15:55, communications with the response team were briefly disrupted, consistent with prior incidents of this type.

At 02:48, a secondary team arrived to assist with cleanup and evidence cataloguing.

At 02:48, the incident was formally closed pending review by the Central Depot oversight committee.

TECHNICAL DATA

Following standard resolution procedure, a technical code was generated and logged against this incident for archival cross-reference purposes.

Bio-Hybrid Diagnostic Code: G8N

This code is recorded here solely for archival completeness and is not required for standard case review.

PROCEDURAL NOTES

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

This report is filed in accordance with Plumber Standard Operating Procedure 4.2, which requires a full incident summary, a subject profile, a chronological action log, and a technical appendix for any field event involving extraterrestrial technology, biology, or personnel.

APPENDIX

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Threat assessments for Aggregor are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section of the Plumber Operations Manual, Revision 12.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

Prior documentation on Aggregor indicates a pattern of activity concentrated around Andromeda Debris Field Checkpoint and comparable sites.

This report is filed in accordance with Plumber Standard Operating Procedure 4.2, which requires a full incident summary, a subject profile, a chronological action log, and a technical appendix for any field event involving extraterrestrial technology, biology, or personnel.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

Aggregor is classified under Plumber records as Osmosian-Annihilaarg Hybrid, associated primarily with incidents involving Andromeda Galaxy relic assembly.
