

PLUMBER INTER-GALACTIC CASE FILE — PCF-CASE-078

Subject:	Aggregor
Classification:	Osmosian-Annihilaarg Hybrid
Domain:	Andromeda Galaxy Relic Assembly
Location:	Andromeda Debris Field Checkpoint
Incident No.:	PCF-3740

OVERVIEW

This file documents a Plumber field response concerning Aggregor, logged under a Andromeda Galaxy relic assembly classification at Andromeda Debris Field Checkpoint. The report below summarizes the chronological action log, subject profile notes, and technical appendix compiled by the responding unit.

SUBJECT PROFILE

Aggregor is classified under Plumber records as Osmosian-Annihilaarg Hybrid, associated primarily with incidents involving Andromeda Galaxy relic assembly.

Prior documentation on Aggregor indicates a pattern of activity concentrated around Andromeda Debris Field Checkpoint and comparable sites.

Threat assessments for Aggregor are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

No unusual physiological readings were noted for Aggregor during this incident beyond what is typical for prior encounters of this classification.

INCIDENT TIMELINE

By 21:15, the situation had been assessed as stable enough to proceed with standard documentation protocol.

At 15:55, containment procedures appropriate to a Andromeda Galaxy relic assembly scenario were initiated.

At 21:15, the incident was formally closed pending review by the Central Depot oversight committee.

At 02:48, field sensors first registered anomalous activity in the vicinity of Andromeda Debris Field Checkpoint.

By 11:05, a Plumber response unit had been dispatched to assess the situation at Andromeda Debris Field Checkpoint.

At approximately 02:48, direct visual confirmation of Aggregor was logged by the responding unit.

TECHNICAL DATA

No incident-specific technical code was generated for this report; standard monitoring equipment was used without configuration changes.

PROCEDURAL NOTES

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

APPENDIX

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

Equipment used during this response was inspected post-incident and returned to standard rotation without flagged defects.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

No additional casualties, injuries, or civilian exposures were reported in connection with this incident.

Cross-referencing between case files is standard practice and should not be interpreted as an indication of a connected investigation unless explicitly noted in the Cross-Reference section below.

Threat assessments for Aggregor are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

No unusual physiological readings were noted for Aggregor during this incident beyond what is typical for prior encounters of this classification.

This document was generated by the Plumber Case Management System and reviewed by a duty officer prior to archival. Any discrepancies should be reported through standard channels rather than amended directly in the archive.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

Aggregor is classified under Plumber records as Osmosian-Annihilaarg Hybrid, associated primarily with incidents involving Andromeda Galaxy relic assembly.

All field agents are reminded that classification levels on this document restrict distribution to personnel who currently carry active Plumber Badge credentials. Handling instructions are listed in the cover section of the Plumber Operations Manual, Revision 12.

Prior documentation on Aggregor indicates a pattern of activity concentrated around Andromeda Debris Field Checkpoint and comparable sites.

This report is filed in accordance with Plumber Standard Operating Procedure 4.2, which requires a full incident summary, a subject profile, a chronological action log, and a technical appendix for any field event involving extraterrestrial technology, biology, or personnel.

Routine archival review confirms that this file meets retention requirements under Plumber Directive 9, Section 3, governing long-term storage of field incident documentation.

Appendix data collected during this incident has been archived alongside standard sensor logs and is available on request through the Central Depot records office.

Threat assessments for Aggregor are periodically revised; agents should consult the most recent Plumber species or subject bulletin before field engagement.

Historical note: the Plumber archival system was migrated from the legacy Ectonurite ledger format to the current digital case-file format following the Central Depot reorganization. Older references may use deprecated file prefixes.

Where applicable, technical reference codes noted in this document are valid only for the specific incident described herein and are superseded by any later-dated report referencing the same subject.

No unusual physiological readings were noted for Aggregor during this incident beyond what is typical for prior encounters of this classification.

Agents completing this form should verify subject identification against the most recent Plumber species registry before submission, as taxonomic reclassifications occur periodically as new data becomes available.

This appendix section is provided for completeness in accordance with archival formatting requirements and does not contain information beyond what is summarized in the main report body.
